Below command are specific to Linux & Mac OS. You can also once again view the lecture titled **Setting Classpath Environment Variable** in Section 2 to see the process on Mac OS and it would be quite similar on Linux too.

1. View existing classpath

echo ${CLASSPATH}

2. Set classpath

export CLASSPATH=<sequence of paths>

For <sequence of paths>, on Linux you may have to set it as follows.

.:/root/javaindepth/src

For <sequence of paths>, on Mac OS you may have to set it as follows.

.:/Users/admin/javaindepth/src
